## ABOUT ME

**Seven years of experience in web development**, primarily using Laravel, with additional expertise in network infrastructure and business-focused digital solutions.

**My approach is solution-driven and efficiency-focused.** I believe technology should simplify operations, reduce unnecessary costs, and create measurable business value.

**I work across the full implementation scope**, from analyzing business needs to delivering ready-to-use solutions using AppSheet for rapid deployment and Metabase for instant dashboards and reporting.

**With an IT consultant mindset**, I help businesses choose the right technology for the right problem, balancing performance, speed, cost efficiency, and long-term sustainability.
